What This Is About

Liberty is the most valuable premise for our country's founding. There are many tenets from which the Founders drew to create our governing document, The Constitution of the United States of America. This document was boldly and eloquently put forth 222 years ago on September 17, 1787.

Since then, each succeeding generation has dealt with many seemingly grave issues of their time, yet when viewed through the prism of history these issues pale in perspective to what we face now as a country.

This publication is not focused on topical issues and emotions which drive us apart, but rather this publication will highlight and cheer the many amazing, positive, productive, and sustainable activities thriving in our country and our communities.

We believe that our country is not only built upon the effective foundation of checks and balances, but that we *still hold the power*, as citizens and as consumers, to create the positive changes necessary to see the American Dream thrive.

Small businesses can and will PROSPER - they generate half of the gross domestic product in the private-sector. They are an integral part of local economic development and a thread for communities to keep their "dollars" circulating amongst those upon whom they depend.

We must actively THINK and LIVE according to our roles as citizens - we have to hold our elected officials accountable and praise those in our communities that are standing up for our freedoms.

Sustainable FOOD systems are critical to our economic viability, and we stand for farmers, ranchers, and producers who provide us with the agricultural means necessary to live. We understand the crucial nature of a sustainable food supply, one that can be achieved by local producers using value-chains that enhance the economic development of the people and cities in which they operate.

Our RESOURCES as a nation are critical to our new energy economy and to the health and wellness of our children and grandchildren for generations to come. Our energy, land, air, and water hold economic promise for us, however we must also be cognizant of these resources' means, and effectively plan for the future.

We understand that the ARTS and CULTURE of our communities give students and people the creative outlets necessary to express themselves in an intellectually stimulating environment. We believe that TRAVEL is an inherent part of the American dream, and that as we move around the country, whether it is for business, family, or pleasure - it is a foundational part of our economy.

We must ACT - we must actively partici-

pate in our communities and engage both our system of governance as well as the economic ecosystem in which we live. We act by spending our money, by writing our representatives, and by voting.

And we must focus much time and attention on our NEXT generation, those that will be our future industry leaders, scientists, farmers, and soldiers. Our youth and our students are crucial to our future and we must be willing to support them and help pave the road to prosperity. Honoring our elders sets an example for the next generation - we show all generations have value to contribute ensuring a legacy of wisdom and grace will safeguard our civil and productive society.

The Good American Post is about Freedom, and our content, as you will see to your right, is just about that. We are coming to a community near you, to serve you with Local and National content focused on Freedom, on Sustainability, and on all of the good news that we have at our finger-tips to take each and every ounce of our energy and move in a positive direction of change - change that WE make - change that comes from us, as Americans.

- Tisha T. Casida, Publisher

INDEPENDENT THINKERS: WELCOME

PROSPER

People and Businesses that are Prospering and Creating Wealth for Themselves and their Communities.

- Small Business Strategy Success
- Editorials, Local Business-Owners
- Business & Organization Openings
